DETAILED ACTION

- (1). Applicant's Amendments and Remarks filed on 1/16/2009 have been received.
Claims 1-10 are amended.
A new ground of rejection for claims 1-10 is presented in succeeding paragraph.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

- (2). **Claims 1-10** are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. In claim 1, it recites: pressurized liquid ammonia being at a pressure greater than flow of synthesis gas taken from the first or intermediate stage of compression. However, it is not supported in the Specification literally. Although it is disclosed pressurized liquid ammonium ([0027]) and create a compression of such flow of reactant gases inside the mixer 16 ([0035]), but it does not cite the pressure of liquid ammonia is higher than that of synthesis gas, furthermore the compression due to the liquid ammonia could be the same volume of synthesis gas occupied by liquid ammonia, not only momentum impact by liquid ammonia. It raises a new matter and rejected.

Claims 2-10 are rejected because of their dependence.

Response to Arguments

- (3). Applicant's arguments filed on 1/16/2009 have been fully considered but they are not persuasive. Applicant asserts that prior art Moore (WO 01/66465A1) teaches explicitly to reduce the pressure of the liquid medium before it enters the dehydrator, via valve 55 (cf. page 10, line

Art Unit: 1797

28). This is a further confirmation that Moore ignores any use of pressure energy of the liquid ammonia (page 7, current Remarks).

However, the pressure reduce valve 55 is used in conjunction with the dehydrator – bubble cap trays disclosed by Moore (WO 01/66465A1), in combining, the Venturi mixer disclosed by Bendix and Torkildsen (WO 99/13963) would replace the reduce valve 55 and bubble cap tray dehydrator together.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
